Information Given or Action Taken

1. Have they ordered Bridge casting yet? - DIA representative coming over to look at ours - to see if they want the upper right drive wheel placed down opposite the Y drive.
2. Advised him of the changing of focus + light intensity when moving the stage in the x direction. Suggested collimated light w/ condenser under the stage. He said this contained a collimated source + could see no reason for change in focus + illumination. They will look into it

We are to call re the bridge design as soon as DIA expresses an opinion on placement of the drive wheel.
